PROJECTS

Cognitive Fatigue Analysis with fMRI data

- Built a semi-supervised model that predicts different levels of cognitive fatigue in subjects with/out Traumatic Brain Injury (TBI) using their fMRI scans (with 86% accuracy).

Cognitive Assessment in Children with Action Recognition

- Built a multi-modal network that utilizes body-keypoints, object detection, and optical flow for activity recognition to assess cognition in children by analyzing their executive functions through multiple standardized physical tasks

Dynamic Gesture Recognition for Game-based Wrist Rehabilitation

- A deep learning model to detect real-time dynamic hand gestures to control a character in the game that helps in rehabilitation of subjects with wrist injuries

Mobile Autonomous Retinal Evaluation (MARVIN)

- Built a deep learning retinal evaluation system that grades diabetic retinopathy from retinal images

KrishiSathi

- A web portal for farmers integrated with Machine Learning and IoT to analyze crops and their growth daily

BP & Heart Rate Monitoring System

- A health analyst web application (Angular SPA & Django REST) powered by an IoT Blood Pressure device and machine learning

WCMS for a Juice Sales Enterprise

- Developed a data-analysis web application to manage, monitor, and visualize sales in a commercial enterprise
