## EXPERIENCE

### Software Engineer

#### Python Team (Insight Workshop)

📅 May 2018 – Present 📍 Kathmandu, Nepal

- Write effective, scalable code in Django & Angular and develop back-end components to improve responsiveness and overall performance
- Implement security and data protection solutions with AWS Services (EC2, RDS, S3, Lambda, CloudWatch)
- Coordinate with internal teams to understand user requirements and provide technical solutions.
- Develop custom python packages and libraries as per the client and project's needs

### Machine Learning Engineer Trainee

#### Insight Workshop

📅 Dec 2017 – April 2018 📍 Kathmandu, Nepal

- Implemented AI & ML algorithms for optimization of web applications and services (data-related applications like document similarity & classification)
- Learned & incorporated classical machine learning techniques in web applications
- Worked on IoT projects related to health monitoring system

## ACHIEVEMENTS

- Fusemachines Datathon Winner 2018
- 3-Day Drone Workshop 2016 - Kusma, Parbat
- Placed as 1st runner-up in KrishakCopter – International Drone Competition 2016
- Semi-Finalists in National Sumo-Robot Competition - "Manual Akhada" & Runner-up in Line-Following Robotics Competition

## SKILLS

Python, Django, JavaScript, Angular

AWS, Git, Linux, TDD

Pandas, Matplotlib, Numpy, SQL, Scraping

Scikit-learn, Keras, TensorFlow, Jupyter NB

## EDUCATION / COURSES

### Micromasters in Artificial Intelligence

#### Columbia University - EdX

📅 Jan 2018 – May 2019

### Bachelors in Electronics & Comm. Engineering

#### Kathmandu Engineering College, Tribhuvan University

📅 Nov 2014 – Sep 2018

## HONORS & AWARDS

- Selected as an **AI Scholar** in 2018 - FuseMachines Nepal
- Awarded as one of the **25 AI-fellows** from Nepal in 2017 - FuseMachines Nepal
- **Regular (Full) Scholarship** awarded by Institute of Engineering - B.E.

## PROJECTS

### KrishiSathi

- A web portal for farmers integrated with Machine Learning and IoT to analyze daily crops and their growth

### Semi-Autonomous Solar Panel Cleaning Robot

- A semi-autonomous robot that turns on street lights and then cleans solar panels autonomously with assistance from a small helper robot
- Yielded us the **Best Engineering Award** at Robocon Nepal 2018

### Hexacopter

- A self-designed hexacopter (drone) with a customized KK2 flight controller
- Yielded us the second place in an international drone competition

### Industrial Robotic Arm

- Arduino-driven and supported by servo motors, the arm is a prototype for carrying out industrial chores
- Powered with record-and-play feature for automation

### Currency Predictor

- A simple Django web application that predicts the price of a selected cryptocurrency in the near future, using timeseries

### BP & Heart Rate Monitoring System

- A health analyst web application (Angular SPA & Django REST) supported by an IoT Blood Pressure device

### WCMS for a Juice Sales Enterprise

- Developed a data-analysis web application to monitor and visualize sales in a commercial enterprise
- Applied an extension of python's **gestalt pattern matching** approach to resolve data duplicity issues

### GRE Vocab Wallpaper

- A python script for Linux that changes desktop wallpaper every minute with a random GRE vocabulary
- Helped me score a 321 in the GRE with a 4.5 in AWA
