I am a Ph.D. candidate specializing in machine learning and computer vision with a focus on enhancing human-computer interaction. I have **over four years of research experience** in this field and am adept at leveraging advanced data-driven methods and analytics to provide valuable insights. My expertise lies in statistical analysis, supervised and unsupervised machine learning (ML), deep learning (DL) algorithms, and signal processing. I have successfully conducted classification and regression analysis on various data modalities. My research also focuses on applying self-supervised learning to obtain effective representations of high-dimensional data and combining multiple data modalities to achieve superior performance, which has been demonstrated through **14+ publications** and **1000+ citations**.

EDUCATION

12/2023	Ph.D. in Computer Science University of Texas at Arlington (UTA), Arlington, TX
08/2019	<ul style="list-style-type: none">> Dissertation : <i>An Intelligent Multi-modal Framework Towards Assessing Human Cognition</i>> GPA : 3.86 Focus : Multi-modal Analysis to assess Human Cognition
07/2018	Bachelors in Electronics & Comm. Engineering Tribhuvan University, Nepal
10/2014	<ul style="list-style-type: none">> Project : <i>KrishiSathi : Recommendation Tool for Farmers using Machine Learning to Increase Production</i>

PROFESSIONAL EXPERIENCE

Present 08/2020	Graduate Research Assistant, UNIVERSITY OF TEXAS AT ARLINGTON, Arlington, TX, USA <ul style="list-style-type: none">> Built a machine learning tool to detect cognitive fatigue (CF) in subjects with spinal cord injuries while performing day-to-day tasks using multi-modal wearable physiological sensors (ECG, EDA, EEG) and vision sensors (RGB, depth cameras).> Applied deep learning techniques to detect cognitive fatigue (CF) in people with Traumatic Brain Injuries (TBI) through fMRI scans.> Developed an automated assessment system (ATEC) using computer vision and machine learning to assess embodied cognition (EC) in children through human activity recognition and classification in videos while they performed clinically-approved physical movements/tasks. Applied self-supervised learning techniques to improve the overall performance. <div>Python PyTorch Computer Vision Deep Learning Wearable Sensors Self-supervised Learning</div>
08/2022 05/2022	Machine Learning Intern, META INC., Menlo Park, CA, USA <ul style="list-style-type: none">> Worked with the Audio-Video Understanding team to build a system that visualizes the current popular trends going on in REELS videos uploaded on Facebook and Instagram.> Techniques applied : Unsupervised Clustering of videos, NLP to assign topics to clusters generated, UI Dashboard, and Search Indexing API for video search based on topics generated.> My POC was used to pitch in as a service for other clients in the company by my team manager. <div>Visualization Unsupervised clustering Search Indexing NLP</div>
08/2020 08/2019	Graduate Teaching Assistant, UNIVERSITY OF TEXAS AT ARLINGTON, Arlington, Texas, USA <ul style="list-style-type: none">> Courses taught : Human-Computer Interaction, Advanced Programming, Computer Hardware/Software Systems (Raspberry Pi Labs). <div>Teaching Programming Software Engineering Hardware Engineering</div>
07/2019 04/2019	Scientific Applications Programmer, SOCIALEYES NP, Kathmandu, Nepal <ul style="list-style-type: none">> Researched and implemented computer vision techniques with transfer learning to detect diseases from retinal images targeting macular degeneration with 89% classification accuracy.> Built a risk analysis matrix dashboard to visualize patient's health information. <div>Image Processing Deep Learning Amazon AWS Visualization</div>
05/2019 12/2017	Software Engineer, INSIGHT WORKSHOP, Kathmandu, Nepal <ul style="list-style-type: none">> Developed the core internal system of a national frozen beverage enterprise in the US inciting a high ground in its space and extending growth rate.> Built MVP for a healthcare startup in the US that digitizes real-time health information for patients with IoT and empowers the practitioner-patient relationship <div>Python Django Amazon AWS JavaScript Angular</div>

TECHNICAL SKILLS

Programming	Python, C, C++, JavaScript, MATLAB, AVR/Arduino, Bash/Zsh.
Machine Learning & Analysis	PyTorch, TensorFlow (Keras), NumPy, Pandas, Matplotlib, Scikit-learn, SQL, AWS Aurora.
Software Tools	Git, Github, Jupyter Notebooks, VS Code, ROS.
OS Systems	Linux, Mac, Windows, AWS EC2, RDS, Lambda.
Skills Currently Acquiring	Large Language Models (Transformers), Diffusion Models.

SELECTED PROJETS

COLLABORATIVE RESEARCH : DARE : A PERSONALIZED ASSISTIVE ROBOTIC SYSTEM THAT ASSESSES COGNITIVE FATIGUE IN PERSONS WITH PARALYSIS (NSF GRANT : 2226164) 2022 - 2025

[Project Description](#)

The objective of this project is to design and develop an end-to-end personalized assistive robotic system, called iRCSA (Intelligent Robotic Cooperation for Safe Assistance), to recognize, assess, and respond to a human's cognitive fatigue during human-robot cooperation. The focus of the system is on human-robot cooperative tasks where a human with SCI and a robot cooperate during daily tasks (e.g., cooking). Students who have experienced SCI will be involved in every stage of the project, to ensure the acceptability and usability of the proposed system. This project will develop an end-to-end framework for online cognitive fatigue assessment as part of the proposed Human-Robot Cooperation (HRC) system, which constitutes a breakthrough in the ability to effectively integrate the human component in the adaptation (personalization) of assistive robots and address key HRC challenges through these three thrusts : The development of a novel human-technology system for online cognitive fatigue assessment using multimodal data; the development of an adaptive robotic system for personalized interaction based on cognitive fatigue assessment; and an experimental testbed of HRC scenarios to enable HRC, machine/deep learning, and robotic systems computational advances.

CHS : COLLABORATIVE RESEARCH : COMPUTATIONAL SCIENCE FOR IMPROVING ASSESSMENT OF EXECUTIVE FUNCTION IN CHILDREN (NSF GRANT : 1565328) 2016 - 2022

[Project Description](#)

Attention deficit hyperactivity disorder (ADHD) is a psychiatric neurodevelopmental disorder that is very hard to diagnose or tell apart from other disorders. In this project, an interdisciplinary team of computer and neurocognitive scientists will develop and implement transformative computational approaches to evaluate the cognitive profiles of young children and to address these issues. The goal of this research is devising new human motion analysis and computer vision algorithms that can automatically assess embodied cognition during structured physical activities, and which will constitute a breakthrough in improving the accuracy and efficiency of cognitive assessments of young children. Intelligent mining techniques will be used to discover new knowledge about the role of physical exercise in cognitive training and to find correlations between individual metrics and degree of improvement over time.

PFI:BIC : IWORK, A MODULAR MULTI-SENSING ADAPTIVE ROBOT-BASED SERVICE FOR VOCATIONAL ASSESSMENT, PERSONALIZED WORKER TRAINING AND REHABILITATION (NSF GRANT : 1719031) 2017 - 2022

[Project Description](#)

The focus of this project is to develop a smart robot-based vocational assessment and intervention system to assess the physical, cognitive and collaboration skills of an industry worker while he/she performs manufacturing tasks in a simulated industry setting and collaborating with a robot to do the task. The aim is to transform traditional vocational training and rehabilitation practices into an evidence-based and a personalized system that can be used to (re)train, retain, and prepare workers for robotic factories of the future.
